

Kane Maslen

WEB DEVELOPER

Career summary

I have a passion for creating user-centric mobile and web solutions with a strong background in JavaScript, HTML, CSS, jQuery and web frameworks such as AngularJS. My experience in graphic design coupled with my degree in Information Technology has allowed me to create, develop and implement a range of educational websites and applications for high profile clients such as ABC and SBS.

My ability to produce customised websites and applications using a best practice approach, combined with my desire to continue to learn and develop by utilising new and emerging technologies will be an asset to your company.

Work experience

International Education Services

Web Developer

Feb 2015 - Present

Working closely in a small, agile team I am responsible for the design, development and maintenance of a range of educational websites and applications.

- High level of proficiency with CSS, HTML and JavaScript including libraries and frameworks such as JQuery & AngularJS.
- Exceptional understanding of UI/UX, with the creative ability to produce conceptual designs, wire frames and prototypes to improve the experience of the end user and ensure scalability and consistency across screen sizes and devices.
- Experienced in mobile application development with several apps being released in both Google Play and Apple App stores.
- Experience with Bower, NPM, Grunt / Gulp and Git.
- Produce high quality designs for websites and mobile applications which include logos, icons and artwork produced with Illustrator and Photoshop.
- Investigating, fixing, and debugging software defects.

Stocks Appliances
